

Photofiltre (free alternative to Microsoft Photo Editor for Windows XP)

you should see the following icon: pf-setup-en

Drag this icon on to your desktop (**Copy** and **Paste** this if this does not work)

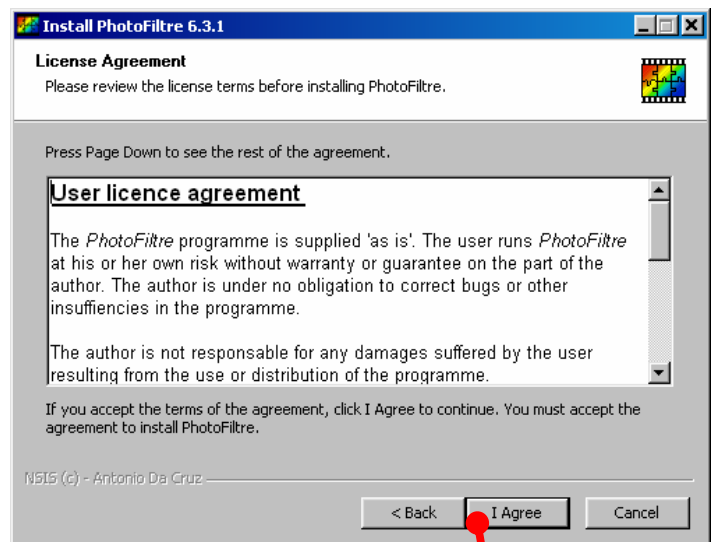

Double click on it and the following appears:

Click the **Next >** button

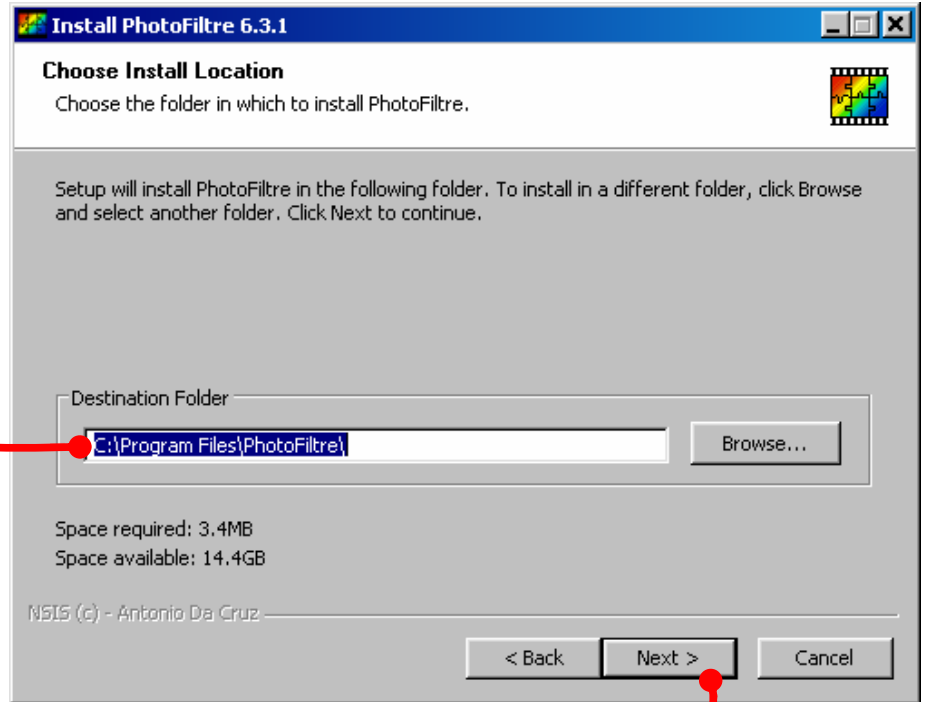

The following appears:

Click **I Agree**

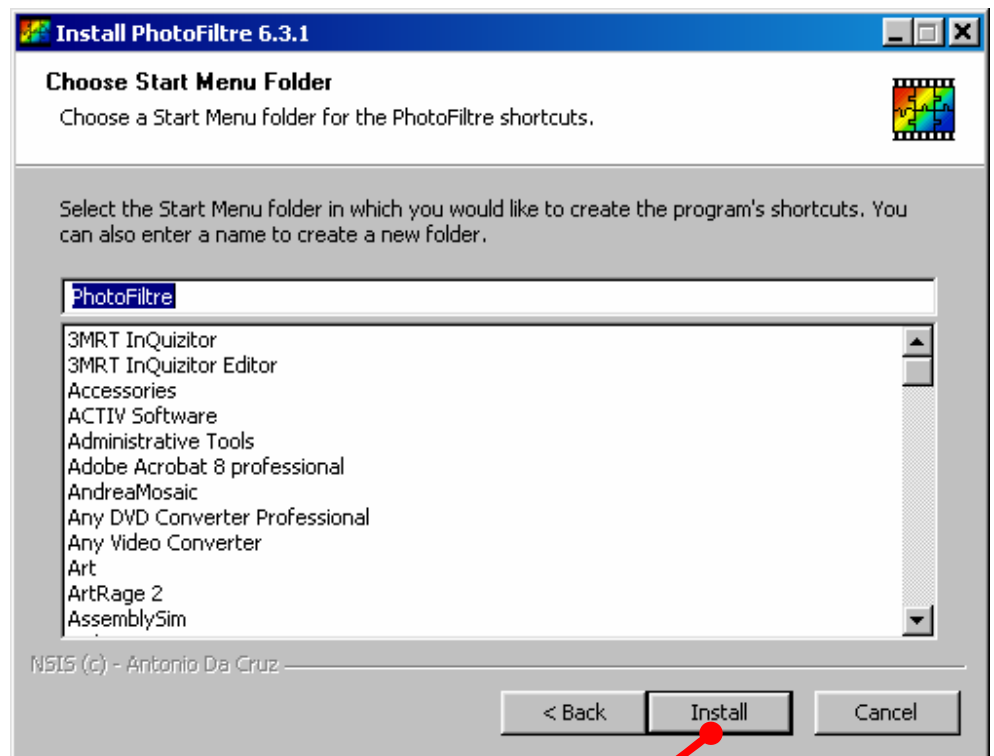

The following appears:

It's best to install it here:

Click the **Next >** button

The following appears:

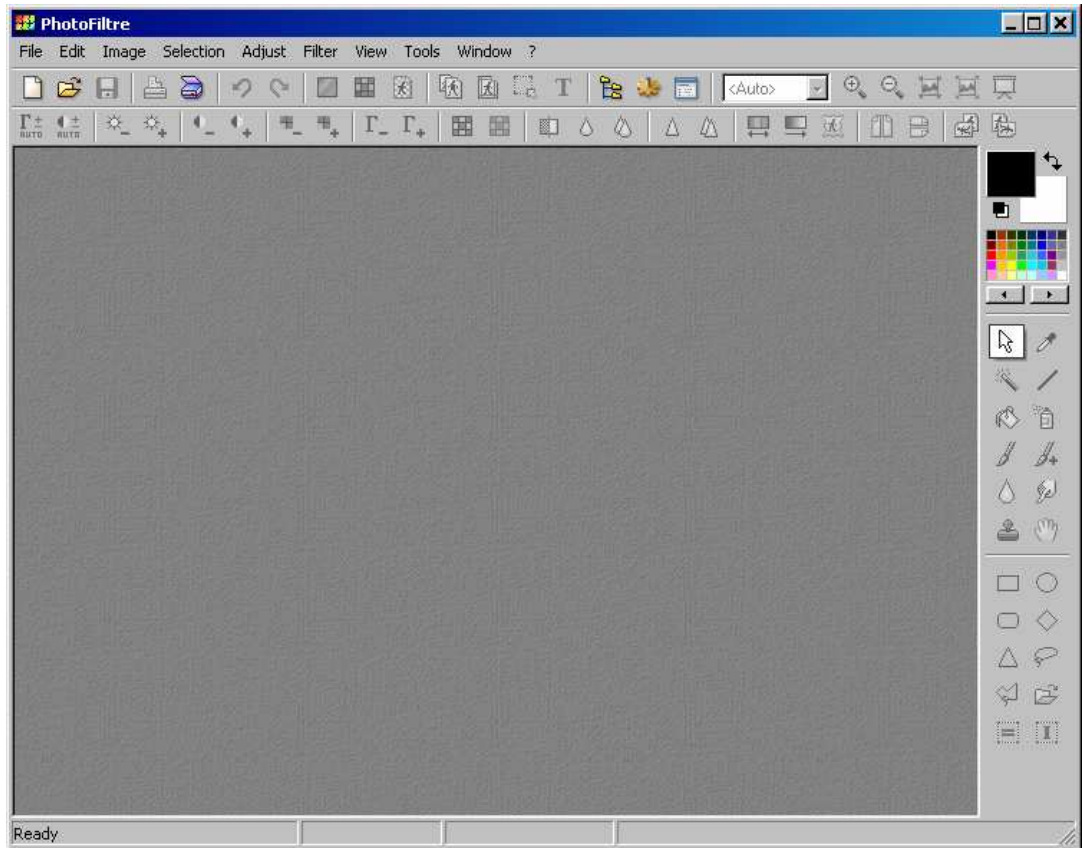

Click the **Install** button

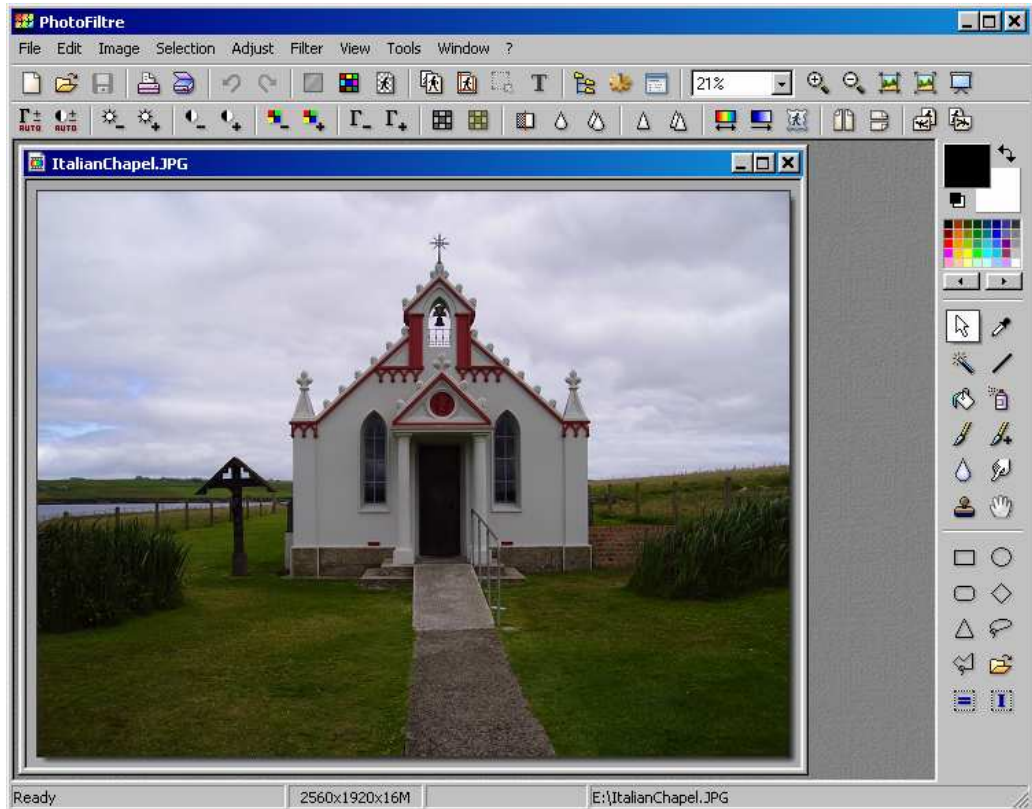

On the last window, click the **Finish** button

The following window appears:

Go to **File | Open...** and select a photograph

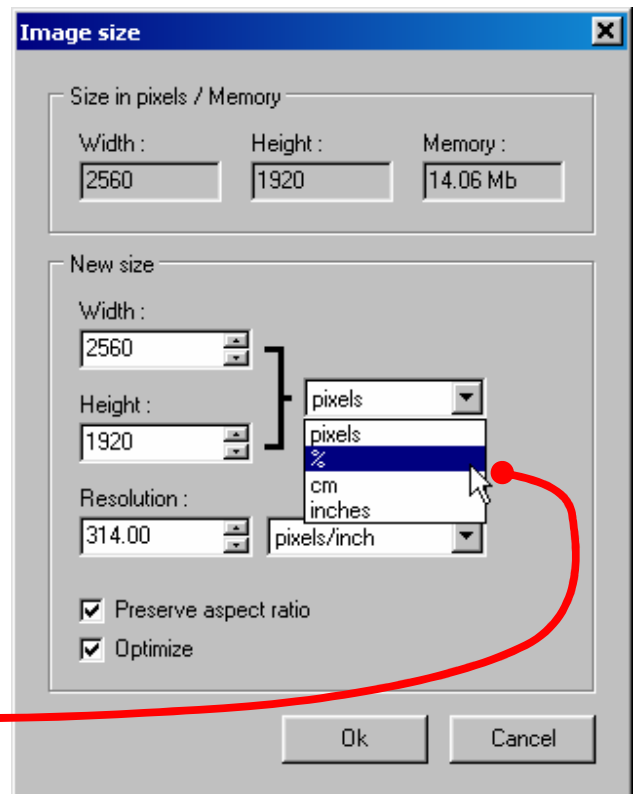

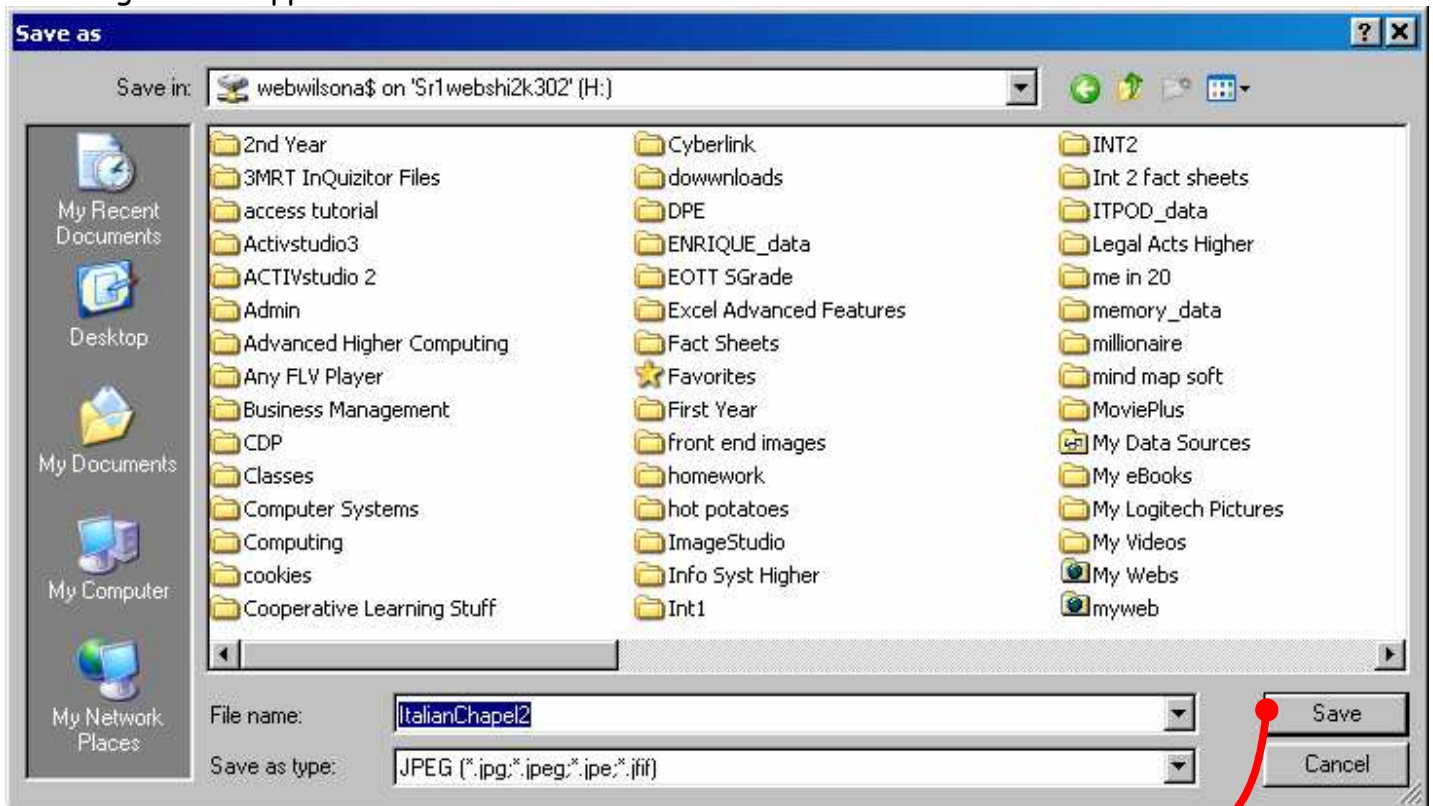

Here you can adjust the physical size of the picture by using **Image | Image Size...**

The following window appears:

Setting to % makes it easier to do

Once you have done this you can *compress* the picture by going to **File | Save As...** The following window appears:

Click the **Save** button (your are best to save the picture with a different name in case you want to go back to the original).

The following appears:

Set this to about **40** and click the **Ok** button
